Installation Guide

"buildenh" is available on `GitHub` at https://github.com/JoaHoe/buildenh_jh

An easy way to install "buildenh" on your computer is by using the app 'GitHub Desktop'. The installation guide for installing this app can be found at [Installing GitHub Desktop - GitHub Docs](#). The documentation for downloading the repository is available at [Cloning and forking repositories from GitHub Desktop - GitHub Docs](#). An external editor must be selected, e.g., RStudio. After downloading the fork (copy) of "buildenh_jh" to your computer, you are asked if you want to contribute to the parent project. In this case, 'GitHub Desktop' has the tools to incorporate the suggested changes.

You can also fork (copy) a repository directly from GitHub. A guide is available at [Fork a repo - GitHub Docs](#).
